No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                             (without alignments)

Patent No. 6080841

GENERAL INFORMATION:

APPLICANT: Au-Young, Janice

APPLICANT: Hawkins, Phillip R.

APPLICANT: Muray, Lynn E.

TILLE OF INVENTION: NOVEL HUMAN INDUCED TUMOR PROTEIN

NUMBER OF SEQUENCES: 5

CORRESPONDENCE ADDRESS:

ADDRESSE: Incyte Pharmaceuticals, Inc.

STREET: 3174 Porter Drive

CITY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 40.8%; Score 42; DB 1; Length 393; Best Local Similarity 41.2%; Pred. No. 1e+02; Matches 7; Conservative 2; Mismatches 6; Indels

Sequence 4, Application US/09061768A

Patent No. 6204037

APPLICANT: BRASH, ALAN R.

APPLICANT: BOEGLIN, WILLIAM E.

APPLICANT: JISAKA, MISUN

TITLE OF INVENTION: LIPOXYGENASE PROTEINS AND NUCLEIC ACIDS

NUMBER OF SEQUENCES: 36

CORRESPONDENCE ADDRESS:

ADDRESSEE: ARLES A. TAYLOR, JR.

STREET: SUITE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD

TITLE NORTH CARCLINA

STATE: NORTH CARCLINA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 4, Application US/09061768A
Patent No. 6204037
GENERAL INFORMATION
GENERAL INFORMATION
APPLICANT: BRASH, ALAN R.
APPLICANT: BOEGLIN, WILLIAM E.
APPLICANT: JISAKA, MITSUO
TITLE OF INVENTION: LIPOXYGENASE PROTEINS AND NUCLEIC ACIDS
NUMBER OF SEQUENCES: 36
CORRESPONDENCE ADDRESS:
ADDRESSEE: ALES A. TAYLOR, JR.
STREET: SUITE 1400, UNIVERSITY TOWER, 3100 TOWER BOULEVARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     44.2%; Score 46; DB 3; Length 677; 40.0%; Pred. Sequence 7155 Application US/09621976

Patent No. 6639063

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Uobert, S.

APPLICANT: Giordano, J.Y.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REFERENCE: GENSET.054FR2

CURRENT APPLICATION NUMBER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SEQ ID NO 7155

LENGTH: 89

MANTALEST APPLICATION NUMBER: US/09/621,976

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 9

US-09-489-019A-12688

US-09-489-019A-12688

Sequence 12688, Application US/09489019A

Patent No. 6610836

GENERAL INFORMATION:

APPLICANT: Gary Breton et. al

APPLICANT: Gary Breton et. al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA

TITLE OF INVENTION: NUCLEIC ACID AND THERAPEUTICS

FILE REFERENCE: 2709-2004001

CURRENT APPLICATION NUMBER: US/09/489,039A

CURRENT FILING DATE: 1999-01-27

PRIOR FILING DATE: 1999-01-29

NUMBER OF SEQ ID NOS: 14342

SEQ ID NO 12688

LENGTH: 428
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 21;
                                                                                                           Length 21;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4, Application US/08689974

Sequence 4, Application US/08689974

Patent No. 5776732

GENERAL INFORMATION:
APPLICANT: AL-Young, Janice
APPLICANT: Hawkins, Phillip R.
APPLICANT: Murray, Lynn B.
TITLE OF INVENTION: NOVEL HUMAN INDUCED TUMOR PROTEIN
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                40.4%; Score 42; DB 4;

SQUENCE AT APPLICATION US/09497491

Patent No. 6630573

GENERAL INFORMATION:

APPLICANT: Walker, Craig

APPLICANT: Shetty, Reshma

APPLICANT: Olivera, Baldomero M.

APPLICANT: Jacobsen, Richard

APPLICANT: Jacobsen, Richard

APPLICANT: Jacobsen, Richard

APPLICANT: Jones, Robert M.

TITLE OF INVENTION: Tau-Conotoxin Peptides

FILE REFERRINCE: Tau-Conopeptides

CURRENT APPLICATION NUMBER: US/09/497,491

CURRENT FILING DATE: 2000-02-04

BARLIER APPLICATION NUMBER: US 60/118,642
